

THE LITTLE BOOK of EXPERIMENTS

The Little Book of Experiments has been developed by Planet Science in collaboration with The AstraZeneca Science Teaching Trust. It contains over 30 innovative experiments for pupils at Key Stage 2/3 which seek to encourage the excitement and vigour that is the basis of scientific exploration. The pack is supported by online resources and each experiment is fully linked to the National Curriculum strategy.

Devised and written by practising teachers, science centres and scientists themselves, this brand new resource provides teachers with fresh stimulus and ideas for bringing fun and interest to science in the classroom.
